

Person ID	Problem	App/Website found [name]/None	Likes	Don't likes	Improvements/ Suggestions
Irfan	An application to suggest a recipe with provided ingredients.	SuperCook Recipe by Ingredient	It has varied options to choose from. A great app for beginners.	Voice recognition is not accurate.	It would be nice if it showed some more recipes classified by country.
Aarthi	An application that can track your calorie and macro micronutrients and gives you recommendations on food to eat.	MyFitnessPal: Calorie Counter	Scans with images and barcodes on the food product. Easy to input information.	Needs a premium subscription. A little expensive.	The QR Scan is not appropriate sometimes. Can improve on that.
Sneha	A map or a guide to any room or place you need to go in a university, especially for new students.	None	-	-	It can be incorporated into Google maps or on the University website and can be made accessible only to students.
Aniketh	An application or website directs you to a nearby restroom in a big city.	Flush - Toilet Finder & Map	It is free and has a good number of locations in its database.	It shows locations even if they're closed.	It needs to update to show only those locations which are open at the moment. Also, can improve on UI.
Tarun	An application that can draw graphs with given equations.	Desmos Graphing Calculator	Nice UI, Easy to use, and gives accurate graphs.	Need to zoom in and zoom out too much to understand better.	It would be nice if they had an equation solver inbuilt into the app, so there is no need to install another one.
